/note="Organ: mixed (see below); Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHW, pregnant uterus NbHW, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization freaction. The driver was PCR-amplified cDNAs from pools 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Bukaryota; Mamalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
nt strand cDNA was primed with a NotI-oligo(dT) and cloned
end enriched, double-strand cDNA was digested with Not I and cloned
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BX354650

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

3']; double-stranded cDNA was ligated to Eco RI adaptors fAATTCGGAATCCTGI, digseted with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library constructed by Bob Barstead. The C2C12 cell line (available from ATC, catalog # CRL-1772) differentiates rapidly, forming contractile myotubes and producing characteristic muscle proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CO252246 693 bp mRNA linear EST 23-JUN-2004 WS00816.E21_C04 WS-X-N-A-9 Picea glauca cDNA clone WS00816_C04 3',

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                         NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STSS are identified using ePCR (Genome Res. 7:541-550) searches STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, Repeats are identified using RepeatMasker (A. Smit and P. Green, Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1s-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence flanked by consensus splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (28-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA on Oct 31, 2002 this sequence version replaced gi:22795134. On May 25, 2002 this sequence version replaced gi:17154304.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations where found these are annotated as variations where differences are found these are annotated as variations where differences are found these are amonated as variations where of the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with conly a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given the feature table with their source databases: Em; EMBL; Sw;, in the feature table with their source databases: Em; EMBL; Sw;, in the feature table with their source databases: Em; EMBL; Sw; in the feature table with their source databases: Em; EMBL; Sw; in the feature chicamation can be found at the privary accession numbers given was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at the privary RPCI-11,2 constructed by the group
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11335 AAAAİGAAAAAAAAİTAĞTÇAĞĞTATĞİĞATĞİĞTĞCÜTACAĞÇÜÇĞĞĞTAĞİTAĞĞ 41276

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the together with a note of the overlapping clone, as we submit sequence submission variation annotation may not be found in the sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were inter double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= chemistry or covered by high quality data (i.e., phred quality >= chemistry or covered by high quality data (i.e., phred quality >= one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession rumbers given in the feature table with their source databases: numbers given in the feature table with their source databases: maker was gamerated atabases can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence

It currently consists of 15 conties. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 10316 BP; 2525 A; 2093 C; 2534 G; 3164 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of digestive system, particularly cancer and cancer metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ouery Match

The present sequence is that of the human apolipoprotein A-IV-related protein (AA4RP) gene on chromosome 11. The gene encodes a 366-amino acid protein (see AAB20103). AA4RP is differentially expressed in obese mouse models, indicating a role in lipid metabolism related disorders. It appears to be the human homologue of rat regeneration associated protein (RAP3), which is believed to be involved in liver regeneration, and is likely to have a similar function. It also shows 52% similarity to apolipoprotein A-IV, and is likely to have a similar function. The invention also provides AA4RP cDNAs (see AAF30036) and polypeptides, invention also provides for genotyphing a nucleic acid containing 1 or more of the biallelic markers. Also provided is a method for detecting a statisfical correlation between a biallelic marker allele and a statisfical correlation between a biallelic marker allele and a statisfical correlation between a biallelic marker allele and a statisfical correlation between a biallelic marker allele and a statisfical correlation between a biallelic marker allele and a biallelic marker allele and a statisfical correlation between the correlation and a statisfical correlations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 phenotype and/or between a biallelic marker haplotype and a phenotype. Diagnostic methods are provided for determining whether an individual is at risk of developing a lipid metabolism related disorder and/or a liver related disorder, such as obesity, diabetes and coronary heart disease, and whether the individual suffers from such a disorder as a result of a polymorphism in the AAARP gene. AAARP DNA constructs can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding apolipoprotein A-IV-related proteins (AA4RP) and biallelic markers of AA4RP, useful for diagnosing lipid metabolism related disorders and/or liver related disorders.

```

```
The invention relates to determining whether a subject has, or is at risk of developing, an abnormally low high density lipoprotein-C (HDL-C) level comprises determining whether the subject has an allelic variant of a polymorphic region from any of 27 genes (alleles listed in Table 5 of the specification). Also included are determining whether a male subject has, or is at risk of developing, an abnormally low HDL-C level, comprising polymorphic region listed in Table 5 which is associated with abnormally low HDL-C levels in males, and determining whether a female subject has, or is at risk of developing, an abnormally low HDL-C level, comprising et at risk of developing, an abnormally low HDL-C level comprising determining whether the female subject has an allelic variant of a polymorphic region listed in Table 5 which is associated with abnormally low HDL-C levels in females. The allelic variant in determining whether a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining whether a subject has, or is at risk of developing, an abnormally low high density lipoprotein-C (HDL-C) level comprises detecting an allelic variant of a polymorphic region from any of a set of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           67624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ñ
subject has, or is at risk of developing, an abnormally low HDL-C level is APOA 1 CC, CD14 1 CT, COLSA2 1 GG, EDNRB 1 AG or AA, FABP3 1 CT, GBE1 1 AG or GG, LIPC 5 AA, MTHFR 1 CC, VWF 2 GG, or their complements. The allelic variant in determining whether a male subject has, or is at risk of developing, an abnormally low HDL-C level, LRP1 3 CC or CT, PAI2 4 GG, or PPARG 1 CG, or their complements. The allelic variants are also COLSA2 1 GG, CD14 1 CT or CC, and FABP3 1 CT, in combination, or their complements. The methods are useful for diagnosting (a predisposition to) abnormally low levels of low high density lipoprotein-C (HDL-C) in a prognosticating diseases and disorders associated with abnormal lipid levels such as vascular and metabolic diseases, e.g., coronary artery diseases. The present sequence is a human gene containing a SNP (single must) contained by the present sequence is a human gene containing a SNP (single must) contained the prognosticated with low high density lipoprotein-C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         96957 AGGCTGAGGTGGAAĞAATCGCTTGAACCTGGAGAGGCAGAGGTTGCAGTGAGCCGAGAAT 97016
                                                                                                                                                                                                                                  The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymuclostide encoding a protein listed in the specification. (Note: The sequence data for this parent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                             AAX54951 to AAX64702 encode the human immune/haematopoietic antigen (I)
anino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polymucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
polymucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
charges and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
concers from the present human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54912 to AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                          738

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       241 ACACCACTACACTCCAGCCTGGGCAACAGAGCAAGACCCTGTCTCAAAAAGGATACAATT 300
                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -AUG-2000
    The invention relates to cDNAs encoding novel human endocrine antigens or a fragment having biological activity, a domain, an epitope, full length protein, variant, allelle variant or a species homologue of the convention. The DNAs and polypeptides are useful for preventing, treating or ameliorating a medical condition when administered (e.g. by coding for the antigens etherapy). Identifying mutations in the genes coding for the antigens is useful for diagnosing a pathological condition or a susceptibility to a pathological condition. The DNAs, antigens and and/ or prognosing disorders related to the endocrine system or hormone imbalance or reproductive disorders, cancers of endocrine tissues, and/ or prognosing disorders related to the endocrine system or hormone imbalance or reproductive disorders, cancers of endocrine tissues, disorders of the pancreas (e.g. diabetes mellitus), the adrenal glands (e.g. hirsutism), ovaries, the thyroid (e.g. hyperthyroidism), the chycothalamus and testes (e.g. vanishing testes syndrome), many examples of diseases and disorders are given in the specification. The present cof diseases and disorders are given in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5412

(HUMA-) HUMAN GENOME SCI INC

```
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

camino acid sequences given in AAM82170 to AAM1921. (I) have cytostatic

activity, and can be used in gene therapy and vaccine production. (I)

corrections and polynucleotides may be used in the prevention, diagnosis and

corrections and polynucleotides may be used in the prevention. Giagnosis and

corrections and polynucleotides may be used in the prevention. For

creatment of diseases associated with inappropriate (I) expression. For

creatment of diseases associated with decreased

creatment they may be used to treat disorders associated with decreased

creativity of (I) by expressing inactive proteins or to

cuplement the patients own production of (I). Additionally, (I)

cuplement the patients own production of (I). Additionally, (I)

cuplement into a host cell and culturing the cell to express the

creative and cancer metastases of haematopoietic-derived cleases, especially

diagnose and treat immune/haematopoietic-derived cells. AAK64703

creates and cancer metastases of haematopoietic antigen genomic

to AAK87694 represent human immune/haematopoietic antigen genomic

creates and cancer metastases of haematopoietic antigen genomic

croacers from the present invention. AAK54912 to AAK54950 and AAM82169

createsers and cancer metastases.
